

Meta-Braze™ HT21 Flux Powder

Brazing Flux Powder

Meta-Braze™ HT 21 Flux Powder is a high temperature brazing flux powder for use with low silver content and brass type brazing alloys. It is used in flame or induction heating processes. It is suitable for use on mild and low alloy steels and tungsten carbide.

Standard	EN1045 FH21	
Melting Range	750°C - 1200°C	
Chemical Composition	Proprietary	
Conditions for Use	Meta-Braze™ HT21 Flux Powder is generally applied by mixing into a paste with water and brushing onto the joint, the residues are insoluble in water and require mechanical removal.	
Forms of Supply	Powder in 400gm pots
